

General Description:

The SM 1000 is a 100% digital download Smart Media player used for Information on Hold. Up to six programs can be stored on the Smart Media flash card for future playback. Messages are downloaded to the Smart Media card via the Proprietary Audio MuVer software from Premier Technologies. Fresh On-hold programs can be downloaded via the internet with MuVer software and a Smart Media read/writer, or by simply inserting a new Smart Media card.

Features:

■ Plug and Play –

Plug in the power supply, place the SM card in the player, connect the unit to the telephone system, and you are ready to go!

■ Non-Volatile Memory –

With Smart Media technology your on hold messages will never be lost due to power failure or brown outs. The SM 1000 will automatically start playing your on hold program when power returns. There will never be a loss of quality since it is a 100% digital memory medium.

■ Selectable Program Playback –

The SM 1000 lets customers choose from up to six different On-hold programs. Dealers can provide customers with multiple programs allowing the customer to make changes on the fly. Customers can switch from holiday messages to their regular On-hold program with the press of a button. This can also be used to highlight a certain program during a promotional period.

■ Industrial Construction –

The industrial SM 1000 is made in the USA. The durable high tech aluminum enclosure is made to

withstand the sometimes rugged conditions of your telephone room.

■ Internet Loadable –

If customers choose, they can use the MuVer software to retrieve or receive On-hold updates through the internet. A Smart Media read/writer is needed. The read/writer connects to the USB port on any computer or via a floppy converter made to write Smart Media cards. In either case the writer can be purchased from a dealer. The MuVer Software can convert MP3, Wave, or Vox files to μ Law format. Just grab the files and save them to your Smart Media card.

SM 1000 Series

Features Continued:

■ Tone Control –

The SM 1000 has a tone control allowing users to set the perfect tone level for their telephone system. This results in superior sound quality, no matter what kind of telephone system you have.

■ 600 Ohm & 8 Ohm Output–

With so many telephone systems in the field, the 1000's outputs will cover any requirement. Customers can control the volume level on their program with easy to access controls on the side of the unit.

Applications –

The SM 1000 Series is suggested for telephone On-hold applications where user friendliness, flexibility, high sound quality, and durability are needed.

Markets –

Music & Message On-hold.
